## SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

- Check the area of your repair for unsoldered or poorly-soldered connections. Check the entire board surface for solder splashes and bridges.
- Check the interboard wiring to ensure that no wires are "pinched" or contact high-wattage resistors.
- Look for unauthorized replacement parts, particularly transistors, that were installed during a previous repair. Point them out to the customer and recommend their replacement.
- Look for parts which, though functioning, show obvious signs of deterioration. Point them out to the customer and recommend their replacement.
- Check the line cord for cracks and abrasion.
   Recommend the replacement of any such line cord to the customer.

## SECTION 1 SERVICE NOTE

## 1-1. REMOVAL OF CASSETTE AT FAILURE WITH CASSETTE INSERTED

- A If tape is wounded on the drum and it cannot be removed: Rotate the capstan motor wheel in either direction and rotate the S or R reel to house the tape. Then, perform Procedure B.
- B If tape is housed in the cassette half and cannot be removed:
  - ① Remove the MD block. (For removal, refer to Section 3-3.)
  - ② Release the drive arm lock from the drive arm (L) located between the L frame and the left side of the cassette controller in the arrow direction (A).
  - ③ Rotate the connecting gear in the arrow direction ⑤ with both the thumbs.

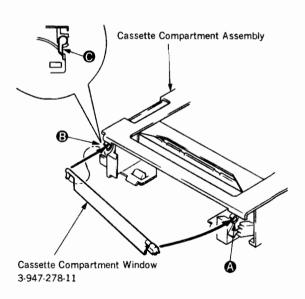

## 1-2. REPLACEMENT OF EXTERNAL PARTS

## 1-3. REPLACEMENT OF CASSETTE DOOR ASSEMBLY

1) Remove the front panel.

2) First undo (A) portion toward you and then undo (B).

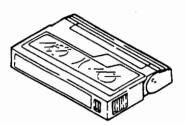

3) When installing, as shown above, first put in **3** portion by setting the claw **6**. Then, put in **A** portion and install so that the door hangs almost vertically.

## 1-4. CLEANING OF VIDEO HEAD AND RUN SYSTEM

## Method 1

(Cleaning Method with Cleaning Tape)

 A cleaning cassette should be used. (When using, the attached manual for the cleaning cassette should be thoroughly read.)

## Method 2

(Cleaning Method with Cleaning Liquid)

- ①Remove the upper case of the video deck.
- ②Apply cleaning liquid to a head cleaner stick.
- ③As shown in the right figure, press the head cleaner stick lightly. Turn the rubber of the rotary upper drum gradually and clean the video deck.

(Cleaning Method for Run System)

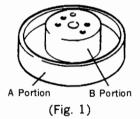

- ①Apply cleaning liquid to a head cleaner stick.
- ②Clean the guides which tape touches directly and the pinch roller with the head cleaner.

## 1-5. REPLACEMENT OF UPPER ROTARY DRUM

## Method 3

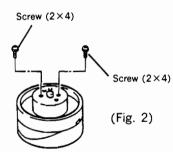

## Caution

- Particular care must be taken when handling the video head and the terminals
- When handling the rotary upper drum, do not touch the side (A portion) and hold the top (B portion) (See Fig. 1)

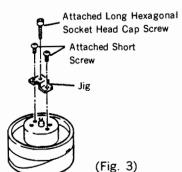

## Removal of Rotary Upper Drum

①Remove two screws (2×4) (See Fig. 2).

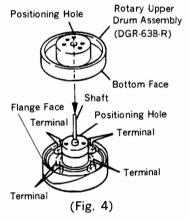

②Fix the jig (supplied with the spare rotary upper drum) with the two attached short screws. Then, put the attached long screw into the jig until the rotary upper drum may be removed (See Fig. 3).

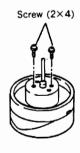

## Installation of New Rotary Upper drum

- ①Clean the flange face and the bottom face of the new rotary upper drum (See Fig. 4).
- ②Insert the shaft attached to the jig into the positioning hole in the lower drum. Then, put the shaft through the positioning hole in the new rotary upper drum and set the drum lightly.

- ③With the shaft inserted into the positioning hole, push into the upper drum lightly with a hand. If the drum is not allowed to be bottomed, alternately tighten two screws  $(2\times4)$  gradually and install the drum (See Fig. 5)
- ④Pull out the shaft inserted. If the shaft is not allowed to be withdrawn smoothly, go back to Step ② and redo the procedure.

(Fig. 5)

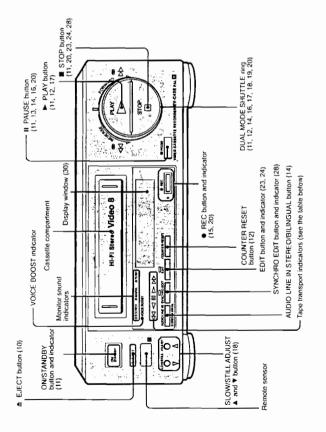

⑤Once the drum has been replaced, clean the video head and the run system with a head cleaner stick (See "Cleaning Method 2 for Video Head and Run System).

#### THIS NOTE IS COMMON FOR PRINTED WIRING BOARDS AND SCHEMATIC DIAGRAMS

(In addition to this, the necessary note is printed in each block.)

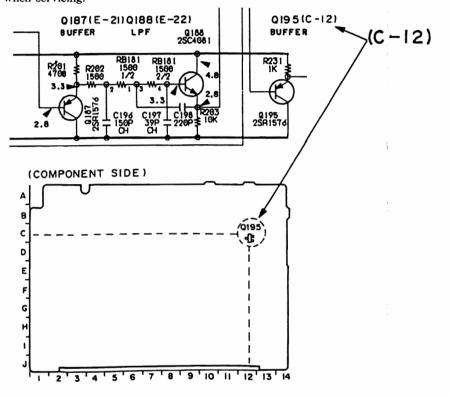

- For printed wiring boards.
- Pattern from the side which enables seeing.
- Circled numbers refer to waveforms.
- For schematic diagram.
- Caution when replacing chip parts. New parts must be attached after removal of chip. Be careful not to heat the minus side of tantalum capacitor, because it is damaged by the heat.
- All resistors are in ohms, 1/4W unless otherwise noted.
- Chip resistor are 1/8W or 1/10W unless otherwise noted.  $k\Omega$ : 1000 $\Omega$ ,  $M\Omega$ : 1000 $k\Omega$ .
- All capacitors are in  $\mu F$  unless otherwise noted. pF:  $\mu \mu F$ . 50V or less are not indicated except for electrolytics and tantalums.
- All variable and adjustable resistors have characteristic curve B, unless otherwise noted.
- m : nonflammable resistor.
- fusible resistor.
- panel designation.
- : internal component.
- : adjustment for repair.
- : B + Line
- --- : B Line.
- 🖚 : IN/OUT direction of (+, -) B line.
- Circled numbers refer to waveforms.
- Voltages are dc between ground and measurement points.
- Readings are taken with a color-bar signal input.
- $\bullet$  Readings are taken with a digital multimeter (DC10M  $\!\Omega$  ).
- Voltage variations may be noted due to normal production tolerances.

Note: The components identified by mark \(\frac{\lambda}{\chi}\) or dotted line with mark A are critical for safety.
Replace only with part number specified.

When indicating parts by reference number, please include the board name.

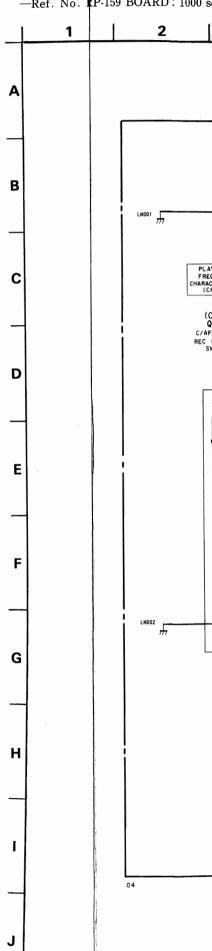

#### [SEMICONDUCTOR LOCATION]

In this service manual, the mounted locations of the semiconductors (IC, transistor, diodes) are indicated in red as shown below. This enables to find the location on the board easily when servicing.

## **SECTION 8** SERVICE MODE

☆This unit uses the EVR (Electronic Variable Resistor) for performing adjustments and tests. These functions are implemented by the SENSER LANC system.

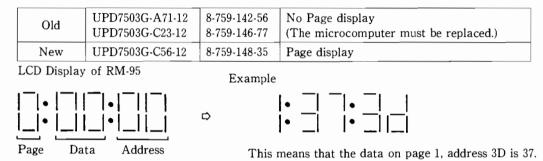

#### 8-1. SENSER LANC

SENSER LANC is the LANC format designed to perform EVR (electronic variable resistor) adjustments and various tests for this 8mm VTR by using the LANC (Control L). The SENSER LANC is synonymous with the old SERVICE LANC. But there have been enhancements and the SENSER LANC is now used as a unified word.

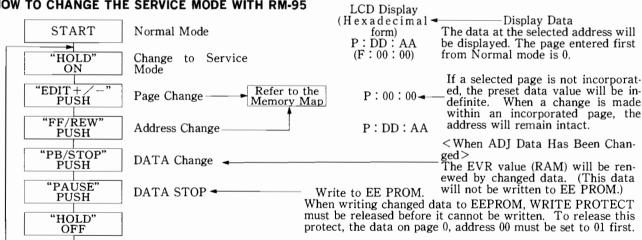

#### 8-2. HOW TO USE THE RM-95 JIG (ADJUSTMENT REMOTE CONTROL)

The RM-95 jig is used to operate the SENSER LANC. This jig will create the SENSER LANC Mode. Because of this, the HOLD switch has been modified for service purpose.

Note that the old models of the RM-95 have no page display function and it is needed to replace their microcomputers within these old models.

## SECTION 9 MECHANICAL ADJUSTMENTS

#### For Mechanical Adjustments

For the procedures how to adjust and check the mechanism, as well as how to replace mechanical parts, refer to the separate 8mm Video Mechanical Adjustment Manual III (9-972-732-01).

However, for the procedures how to set the Track Shift mode, refer to the following text.

#### 9-1. TAPE PASS ADJUSTMENT

#### (TRACK SHIFT)

The 8mm Video Tape Recorder system uses the AFT (Automatic Track Finding) function in which four different pilot signals are used for controlling the tape speed instantaneously to provide high precision tracking. This eliminates the Tracking Adjustment control, thus allowing accurate tracing.

In spite of its advantageous feature, the AFT system may have a difficulty in adjusting the tape pass system. The ATF will automatically corrects tracing even if the head has only a little tracing distortion. This may make it impossible to perform a complete adjustment.

Therefore, when performing a fine adjustment for tracking, the Track Shift mode should be entered before starting this adjustment. This mode will force to operate the ATF to shift the amount of tracking by a given quantity (approximately 1/4), so that tracking can be easily fine adjusted. Furthermore, no track shift jig is needed.

#### 9-1-1. Setting the Track Shift Mode

- Place the adjustment remote control RM-95 (J-6082-053-B) in the HOLD ON position.
- 2) Operate the EDIT+/— button to select adjustment page  $\bigcup_{l=1}^{l-1}$ .
- 3) Operate the FF/REW button to select adjustment address  $\overline{U}_{i}^{T}$ .
- 4) Operate the PB/STOP button to set to adjustment data  $\vec{\Box} \vec{\exists} \vec{\cdot}$ . (This will go to the Test Mode 3 (Pass Adjustment).)
- **Note 1 :** For details of the Test Mode, refer to "SECTION 8. SERVICE MODE."
